Product features

Mode of operation

DGRVU24-SR is controlled by means of a standard control signal DC 2(0)...10V and travels to the position defined by the signal. The feedback signal U allows the valve position (0...100%) to be electrically indicated and serves as a follow-up control signal for other actuators.

Adjustable angle of rotation

Adjustable angle of rotation with mechanical end stops.

High function reliability

The actuator is overload-proof, requires no limit switches and stops automatically when the end stop is reached.
